Career Objective

Data Specialist and Python automation developer with experience improving IBM configuration, validation, and knowledge workflows. Skilled in Python, SQL, Excel, Django, and IBM watsonx.ai, with a practical focus on reducing repetitive work, improving accuracy, and producing results that can be checked and audited. Recent work includes an internal EACM guide assistant and a desktop feature-selection automation tool.

Professional Experience

Data Specialist | 2025 – Present

- Manage and maintain 1,000+ IBM server feature codes, covering creation, updates, retirement, and product lifecycle changes.
- Validate EACM XML, RFA and Excel templates, and configuration tools, investigating mismatches before data is released.
- Identify configuration issues that could lead to ordering errors or downstream defects and work with the relevant teams to correct them.
- Built an internal EACM Guide Assistant that retrieves answers from approved process guides using Django, BM25 retrieval, and IBM watsonx.ai.
- Developed a Python-based Selection Bot that reads machine type, model, and feature-code data from Excel and selects exact rows in the EACM Product Structure grid.
- Work with global cross-functional teams to test changes, document findings, and support timely product and data releases.

IBM CIO IT Services | 2023 – 2025

- Provided end-user support across Windows, macOS, Android, and iOS environments while maintaining strong service quality.
- Resolved SLA-driven incidents involving operating systems, Microsoft 365, VPN, identity, and network-related issues.
- Handled high-priority escalations and coordinated with global incident management teams when wider support was required.
- Applied cybersecurity, access-management, and data-privacy practices during troubleshooting and user support.
- Supported Microsoft 365, Azure AD, and other identity and collaboration tools.

Education

- **Bachelor of Engineering:** Computer Science and Engineering, Don Bosco Institute of Technology (DBIT), Bangalore (May 2023)
- **Diploma:** Computer Science and Engineering, Raman Polytechnic, Bangalore (March 2020)

Technical Skills

- **Programming & Web:** Python, SQL, Django, JavaScript, HTML, CSS
- **AI & Retrieval:** IBM watsonx.ai, Retrieval-Augmented Generation (RAG), BM25, deterministic routing, prompt design, grounding and citation validation
- **Automation & Data:** Microsoft Excel, Pandas, OpenPyXL, XML processing, pywinauto, PyAutoGUI, Pyperclip, data validation and reporting
- **Document, DevOps & Testing:** PyMuPDF, python-docx, BeautifulSoup, lxml, Docker, Docker Compose, Gunicorn, GitHub Actions, Git, pytest, SQLite
- **Systems & Support:** IBM eConfig, EACM, Microsoft 365, Azure AD, Windows, macOS, Linux, TCP/IP, DNS, DHCP, VPN

Professional Accomplishments

- **EACM Guide Assistant:** Developed a Django-based internal knowledge assistant that answers EACM process questions from approved guides. Implemented PDF, DOCX, HTML, and Markdown ingestion, deterministic routing, BM25 retrieval, parent-context expansion, IBM watsonx.ai generation, strict structured-output parsing, and citation checks. The analysed project recorded 1,498 passing tests with no failures.
- **EACM Selection Bot:** Developed a local Python desktop automation tool that reads Machine Type, Model, and Feature Code records from RFA Excel workbooks and selects exact rows in EACM. Added duplicate handling, batching, multi-pass grid scanning, keyboard and clipboard control, exact reconciliation, run logs, and a 19-column Excel audit report. The test suite recorded 1,123 passes with 88% statement coverage, and the supplied logs included a successful 56-record reconciliation run.
- **Buddy Check Automation System:** Built a Python tool to compare IBM server configuration data between EACM XML (ANNTMF) and Excel templates, reducing manual validation effort by approximately 60–80% and improving review consistency.
- **Jira Reporting Automation:** Created a Python workflow to extract and classify Jira ticket data and generate Excel reports with pivot tables for workload and trend analysis.
- **Award:** Received a Quarterly Cash Award for improving the Buddy Check validation process through automation.

Certifications & Courses

- IBM watsonx Essentials
- Microsoft Azure Overview
- Security and Privacy by Design – Foundations
- Interskill Mainframe Specialist – Database Fundamentals (2023)
